

Picture shows HST-WE1-4 with variation code VC0001525

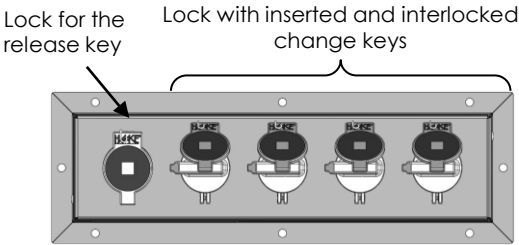

Intended use

The Key change device HST-WE serves as the release of one or multiple key changes with coding, through the previous actuation of one or multiple locks with the help of one or multiple release keys with a different coding.

The HST-WE is used, for example, if in the system more keys are necessary to open the separating safeguard than are free in the initial shutdown. The Key change device acts as a link between the shutdown components of the system and the guard-locking of the separating safeguard.

Function

Initial situation without release key

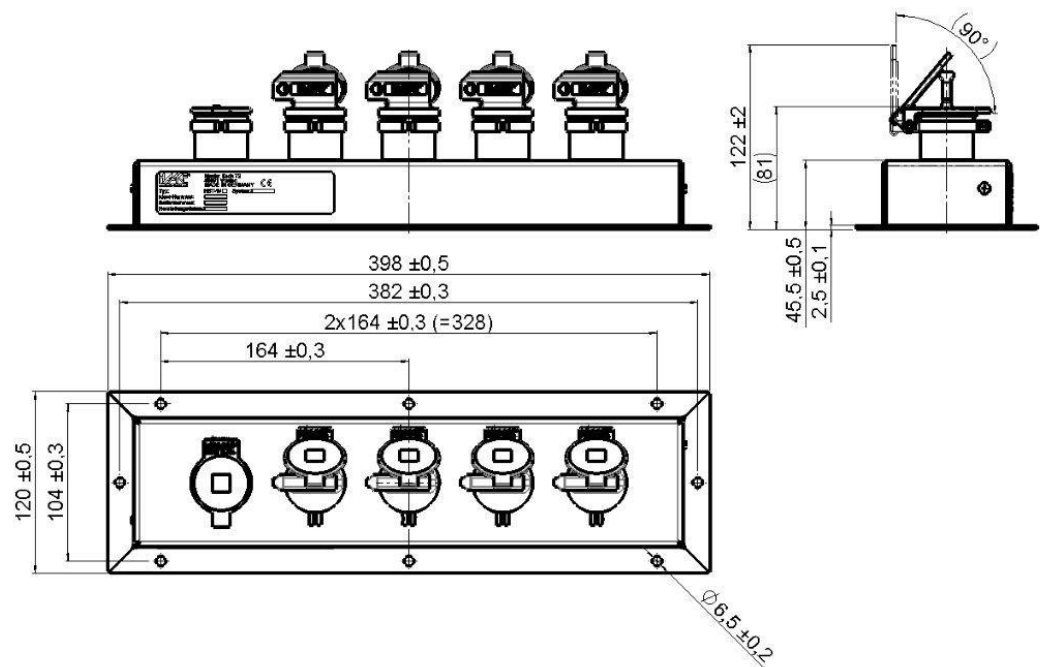

Situation after the key change
